

Lettr

Product Roadmap — Becoming the Go-To App for Working Professionals

This roadmap maps the full range of problems working professionals face — from landing a job to growing a career — onto a phased build-out for Lettr. The sequencing follows one principle: expand deeper into the same user's journey before expanding into new audiences or new business models. Each phase assumes the previous one has real, paying users before development begins on the next.

Phase 1 — Core Wedge — Land the Job

Launch focus: prove the core engine works before adding anything else

- Resume builder (tailored per job posting)
- Cover letter generator
- ATS-compatibility scoring/optimization
- Resume-to-job-match scoring (“how well do I fit this posting”)

Phase 2 — Job Search Companion

Same user, next need in their job-search journey

- Interview question prep generated from resume + job posting
- Mock interview practice (Q&A; simulation)
- LinkedIn profile rewrite/optimization
- Application tracker (status, follow-up reminders)
- Thank-you note generator post-interview
- Salary negotiation scripts/email drafts
- Reference request templates
- Company research briefs before interviews (culture, news, likely interviewers)
- Job alert matching based on resume profile

Phase 3 — Professional Communication & Branding

Expanding into life after the job is landed

- Professional email drafting (difficult conversations, raise requests, giving notice)
- Performance review self-assessment writer
- Promotion / case-for-raise document builder
- LinkedIn content generator (posts, thought-leadership drafts)
- Professional bio generator (speaking, conferences, About pages)
- Elevator pitch / personal positioning statement builder
- Networking outreach messages (event follow-ups, informational interview requests)
- Meeting notes → action items summarizer

Phase 4 — Career Growth & Document Management

Becoming the system of record for someone's career

- Skill-gap analysis (compare resume to target role, suggest what to learn)
- Personalized learning/certification roadmap
- Career document vault — every version of every resume, cover letter, review, stored and organized
- Portfolio website generator from resume data
- Reference letter / recommendation writer
- Career timeline/progress tracker (raises, promotions, skills gained over time)

Phase 5 — Distribution & Platform Expansion

Scaling reach beyond individual users

- B2B channel: bulk seats for career coaches, university career centers, outplacement firms, corporate HR/L&D; teams
- White-label version for coaching businesses
- Browser extension (auto-fill applications, pull job posting data directly into the tool)
- Integrations: LinkedIn, major ATS platforms, calendar (interview scheduling), email
- Mobile app

Phase 6 — Ecosystem

The long-term platform play

- Salary benchmarking data (crowdsourced or licensed)
- Mentor matching between users
- Freelance proposal/pitch tools (for professionals who also freelance or consult)
- Community/forum for career questions tied to a user's own data (personalized advice threads)
- Marketplace for human reviewers (resume/interview coaches) layered on top of the AI output

A Note on Sequencing & Data Design

Phases 3 onward assume Lettr has permission to know a lot about someone's career, performance, and workplace communications — a materially different trust and data-privacy bar than a resume tool. It's worth designing the underlying data model in Phase 1 with this future in mind, even before those features are built, to avoid retrofitting it later. The overarching discipline throughout: validate paying demand at each phase before building the next — feature-spreading early is the most common way bootstrapped products stall.
